Revolutions in Urban Water

Beyond The Water Cycle

Created complete water importation systems; Roman aqueducts.

Water Through History

The development of drinking water filtration systems and disinfecting systems for human use.

Filtration
Sewage treatment plants were developed which in turn helped reduce the spread of waterborne diseases.

Wastewater
Upgrade and improve our current systems so our water use may be more sustainable for people and agriculture.

Upgrades

Israel-Desalination

Water desalination systems helped provide 12% of Israel’s water supply in 2014.

In 2020, Israel’s desalination systems will provide over 30% of their water supply.
